

TESTER-A1 (Art.898-1)

Tester for the electric control of the three weapons and various cables. It comprises an innovative circuit for signalling micro-interruptions of connections.

Main features:

- It has 4 lights: a green one, a red one and two yellow ones. The green and the red light indicate if the circuits are correct. The two yellow ones go on for approximately 1 second at each interruption of the relevant circuit and are therefore useful to show micro-breaks.
- Power supply: 12V battery included (common radio controls battery A23 or VR22 type).
- Sturdy case of extremely small dimensions: 3.8 x 5.5 x 2.9cm. Its small dimensions make it pocket-size. It can be used as a key-ring.

Item codes and prices (not including VAT)

Art.898-1 **EUR 57.00**

TESTER-A1 for weapons and body cords test

The battery is included
Size: 3,8x5,5x2,9cm. - Weight: 0.07kg.

Art.876 **EUR 1.80**

12V alkaline BATTERY (A23, VR22 type)

Spare part
Weight: 0.01kg.
