

INOUT Display /2 (Art.292)

Substitute Board - Visualiser of numbers of players entering and exiting as substitutes in football (soccer) game.

- The electronic display provides a image of modernity as well as being more practical in its use than the traditional cards. Its luminosity attracts attention and is therefore useful for sponsor advertising.
- **There are 2 models available.**
The INOUT DISPLAY/2 visualizes the two numbers simultaneously.
The INOUT DISPLAY/1 visualizes one number at a time. The two numbers, ingoing and outgoing, are however previously registered and then respectively visualised with the IN and OUT buttons.
- **The number is visualised in:**
RED FLASHING for the ingoing player
RED FIXED for the outgoing player
- The INOUT DISPLAY is also useful for indicating the **time added on** for stoppages.
- The numbers are **28cm** high. They are capable of visualising figures from 0 to 99. They are formed with high efficiency leds that are clearly visible even in bright sunlight.
- An appropriate electronic control keeps the **luminosity** of the numbers constant as long as the battery still has some life.
- **Two convenient handles**, placed on the rear part, render the display easy to be lifted and carried.
- A strong **membrane keyboard**, with reaction to touch, is situated between the two handles, this permits easy and convenient control of the visualiser.
- **Internal rechargeable lead battery:** 6V 1.2A. When the battery is fully charged, about 30 visualisations of one minute's duration can be carried out. **Its average life is 5 years.** It is easy to remove and substitute.
- Special attention has been paid to the maintenance of the efficiency of the battery. The equipment **turns itself off automatically** after a certain period of time during which no key has been pressed. However the battery is subject to its own auto-discharge, it is therefore necessary to re-charge it, at least every 9 months, even if it has not been in use.
- The **BATTERY CHECK** button allows a check of the charge level of the battery, indicating a value of 0 (flat) to 5 (fully charged).
- **Guarantee of 2 years.**
- **Dimensions and weight**, with carrying case and battery charger included: 92 x 32 x 8cm - 5.5kg

The **INOUT DISPLAY** is equipped with:

- **Carrying case** for transport.
- **Battery charger.** The standard version is with 230V input. 115V is available on request.
- **Advertising panel** for the sponsor. In the event of there being more than one sponsor, there is a very fast panel change. The dimensions of the advertising space vary according to the model, and are: 80 x 14cm facial part, 80 x 29cm rear part.
