

## Ping-Pong COIN TIMER (Art.202)

Coins timer

---

**For the time operating of ping-pong table.**

### FEATURES

- The Ping-Pong COIN TIMER can also be used where the using time of goods or services, like a ping-pong table, has to be paid by inserting coins or tokens. The maximum cumulative time is 9 hours and 59 minutes.
- According to the value of the money that has been inserted and the hourly tariff that has been programmed, the corresponding time will be automatically loaded. You can arrange, if you wish, up to 3 different hourly rates that will automatically alternate on different time zones that can be programmed for the duration of a day or a week.
- The Ping-Pong COIN TIMER supplies 2 electrical contacts: one for service (SERVICE) to which the load to be controlled must be connected and a signalling one (ALARM) to which it is possible to connect a light that will remain alight during the last minute of the purchased time. Moreover an acoustic signal indicates when 2 minutes and 1 minute is left before the time is over.
- The Ping-Pong COIN TIMER incorporates a container (BOX) which contains the tray for the 2 bats and the ball. The BOX opens in the moment when the money is inserted. At the end of the acquired time, if the tray with ALL the bats and the ball is not inserted and the BOX closed, the acoustic signal will be heard, the electrical load connected to the SERVICE (light, electronic scoreboard etc. ...) will turn off and the ALARM light, if it has been connected, will start to flash. Moreover some special anti-fraud counters allow you to check for how long the ball BOX has been left open after the time is over, even without the use of electricity.
- The general totalizer of the takings and the individual meter for coins, other than the anti-fraud systems, ensure the maximum operating reliability, also without electricity. The visualizer has its own internal lithium battery that ensures complete operation for more than 7 years if it is not connected to the electrical supply.
- Sturdy metal container that can be fixed to a wall.
- The device does not fulfill the Italian obligation of electronic recording and data transmission (Art. 2, comma 2, D.Lgs. Italiano 127/2015).
- Dimensions: width 26cm, height 47cm, depth 26cm.
- Weight: 12.3kg.
- Power supply: 230Vac, 50-60Hz, 250mA Max - Selectable the 115Vac version to the purchase.
- Maximum load applicable to the SERVICE and ALARM contacts: 5A, 250Vac.
